

НАПРАВЛЕНИЕ ПОДГОТОВКИ **09.03.01 Информатика и вычислительная техника**

по домашней работе № 1

Дисциплина: Интернет-Программирование

Преподаватель _____

(Подпись, дата) (И.О. Фамилия)

Москва, 2021

Задание

Основная задача зачётной работы - продемонстрировать полученные знания в создании собственного веб-приложения. Тему зачётной работы допустимо выбрать самостоятельно, но обязательно согласовать с преподавателем.

Обязательные требования к программе:

- Для реализации использовать Ruby on Rails.
- Необходимо иметь контроллеры, обеспечивающие обработку запросов.
- Необходимо использовать модели для хранения данных в БД.
- Необходимо обеспечить аутентификацию пользователей.
- При реализации клиентской части необходимо применить код на языке Javascript и таблицы стилей CSS.
- Провести интернационализацию приложения и обеспечить вывод надписей на русском языке (см. пример в лекции 11).

Цель работы

Написать веб-приложение с регистрацией, возможностью создавать, просматривать, редактировать, удалять и комментировать посты с оцениванием игр и отзывами на них, учитывая все пункты задания.

Исходный код Контроллеры

```
code app/controllers/application_controller.rb
# frozen_string_literal: true

# application_controller
class ApplicationController < ActionController::Base
  def self.default_url_options
    { locale: I18n.locale }
  end

  around_action :switch_locale

  def switch_locale(&action)
    locale = locale_from_url || session[:locale] || I18n.default_locale
    I18n.with_locale locale, &action
  end

  def locale_from_url
    locale = params[:locale]

    return locale if I18n.available_locales.map(&:to_s).include?(locale)

    nil
  end
end
```

code app/controllers/categories_controller.rb

```
# frozen_string_literal: true
```

```

Дурак Онлайн

Category: [Карточные игры](#)

Rating: 5.0/5.0

Наткнулся на данное приложение в play market, так как оно находилось в топе используемых приложений. Решил скачать и поиграть, так как в общем мне нравится эта карточная игра, но давненько я в неё не играл, так как с ботами не интересно, а в реальной ...

Комментирование поста:

игру. В приложении можно создавать и участвовать в различных играх с различными колодами. Это может быть колода с 36-ти, 52-ух или 24-ех карт. Так же игра дурак может быть сама по себе разная. Это может быть переводной дурак, либо обычный, а есть даже такой режим, где можно пытаться обманывать соперника (кладя совершенно неподходящую карту на карту). Я сначала вообще не знал, что такой режим существует, поэтому играя в него, я даже не понимал, что меня обманывают, а я не замечал :) Так же игры зависят и от размера ставок игроков (виртуальных денег). Но лично так как я не азартный, я иду на минимальную ставку и просто играю в свое удовольствие.

Вывод

В ходе данной работы были совмещены и продемонстрированы все знания, полученные мной за данный курс, для создания собственного веб-приложения на Ruby on Rails.
